Windows Phone 7: Silverlight and XNA

In this talk we will see in depth the two programming platforms for Windows Phone 7: Silverlight and XNA. Silverlight is a powerful framework based on declarative XAML and imperative C# for defining beautiful applications and UIs. Silverlight allows developers and designers to mix their respective knowledge seamlessly into a unique blend of web, desktop and phone applications. XNA is a powerful game development framework that allows us to tap the power of the GPU for creating web, desktop, phone and Xbox 3D games.

- Speaker: **Giuseppe Maggiore**
- Docente: **Graziano Pravadelli**
